

How to use AI to shape AI

AI policy is being written right now at the federal, state, and local levels. Ordinary people can use AI to understand proposed laws, figure out who benefits or loses, and make their voices heard before the rules are finalized.

Step 1: Find a piece of AI legislation or policy that you can take action on.

Ask the AI to:

Find legislation that is related to AI or Data Centers and that you can take action on. Here are some suggestions:

- Data Centers
- Facial recognition
- AI in hiring
- AI safety requirements
- Government use of AI
- Children's use of AI
- Copyright and training data
- Disclosure when material is AI generated
- Impact on utility bills and infrastructure and data centers

Step 2: Learn more about the legislation

1. Pick one of the items it returned **based on where your actions can make the most impact.**
2. Ask it to explain it in simple terms, and to not make anything up.
3. Ask follow-up questions based on your values (e.g. environmental impact, social justice, democracy, national security etc).

Step 3: Take action

1. Ask how you should take action, including links to submit comments or phone numbers to call.

Step 4: Discuss

1. What are the key take-aways?
2. Was using the AI helpful?
